

# Bruno Vertical Platform Lift New Platform Gate Option

The new platform gate option provides a full 42" high vertical barrier for added rider safety and security. Equipped with an electrical/mechanical interlock that releases when the platform reaches the lower landing, the new platform gate can be used with the automatic folding ramp (as shown in the photos) or with a pit application (no ramp) for level entry onto the platform at the lower landing. The platform gate can be ordered for both the straight through configuration and the 90° adjacent configuration and can be hinged on either side of the platform.

Please refer to the Bruno VPL typical drawings at [www.bruno.com](http://www.bruno.com) for all dimension details.
